Explore UD Website - ChatGPT Conversation Record

University of Delaware CISC final project | November 12, 2026

IMPORTANT: This is a reconstructed reference record generated from the messages and image attachments available in this chat. Assistant turns are summarized and some long code responses are not reproduced verbatim. This is NOT an official or exhaustive export of every part of the LLM conversation. If your assignment requires every message, export or print the original full ChatGPT conversation as PDF, and upload that PDF instead or alongside this reference.

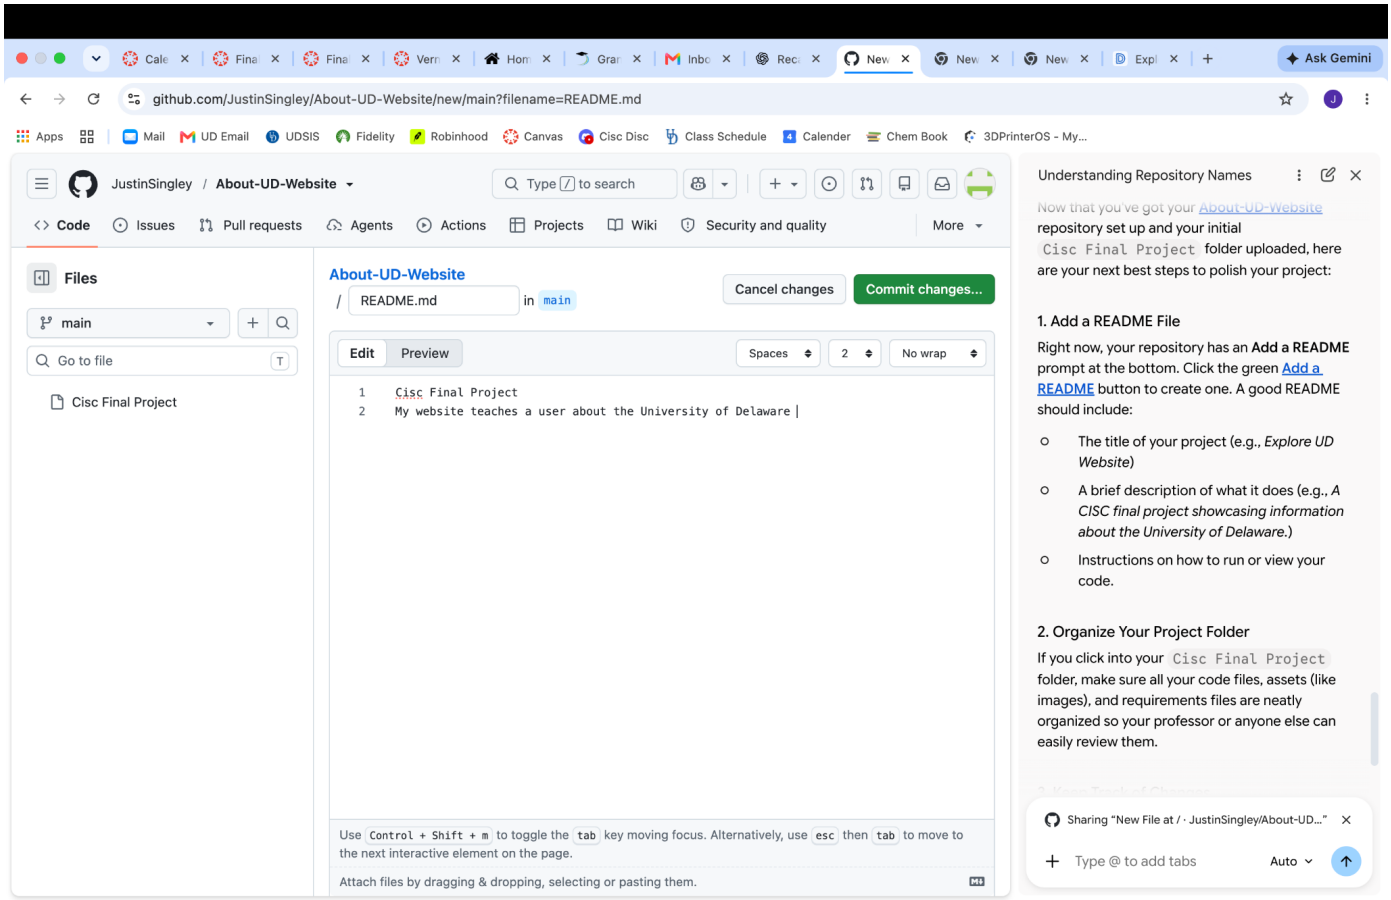

Project repository: https://github.com/JustinSingley/UD-Website
Deployed site: https://justinsingley.github.io/UD-Website/

Conversation timeline and evidence

1. GitHub README

> USER: What is a good README for my GitHub website?

ASSISTANT (summary of response): Suggested a Markdown README for the University of Delaware CISC final project with description, features, technologies, instructions, and author. Explained committing README.md.

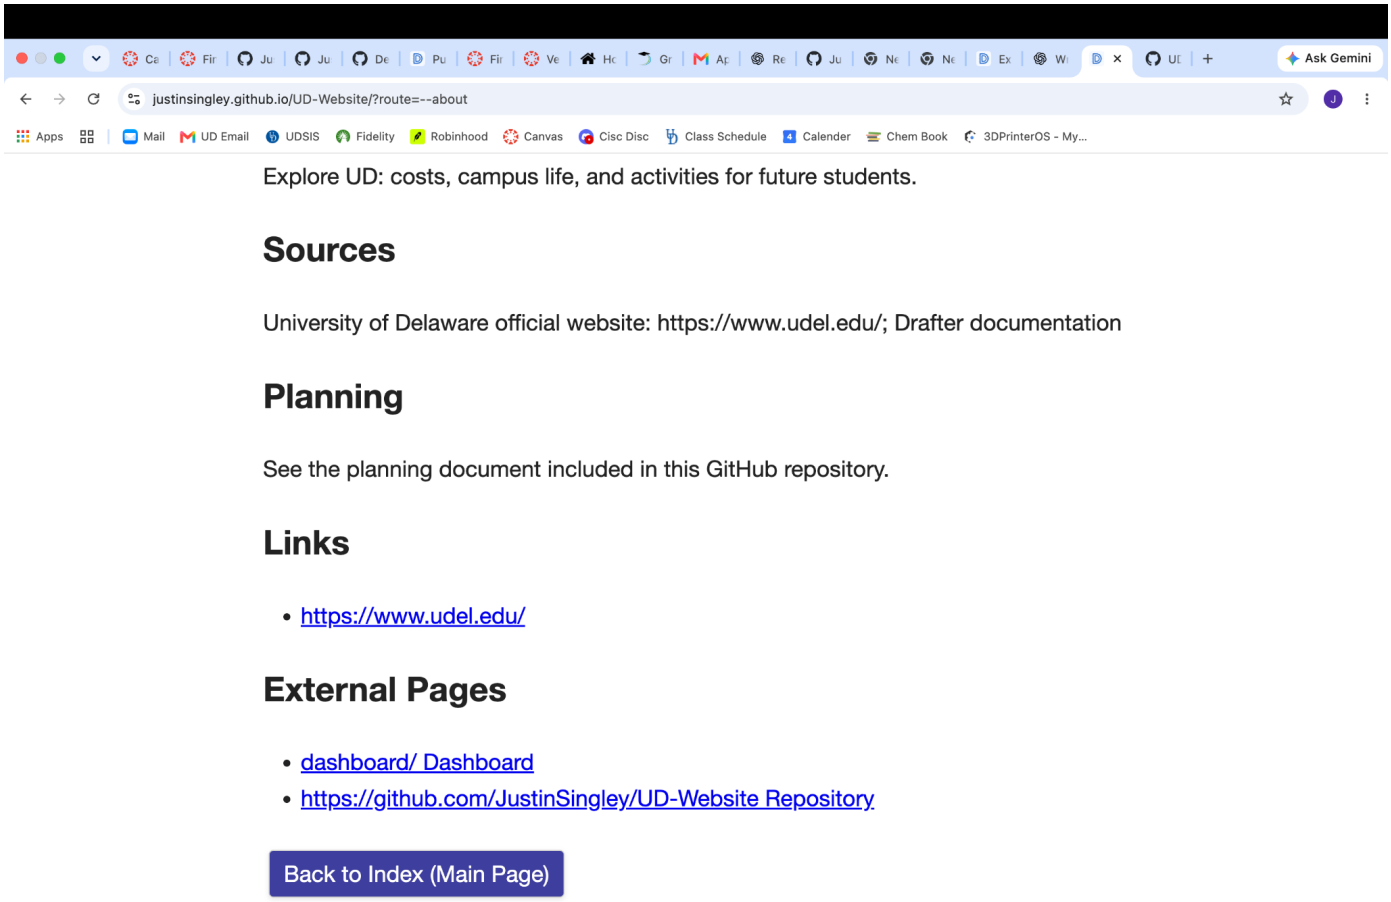

Screenshot supplied during conversation: image(20261112-150126).png

2. Planning section

USER: How do I change the Planning section?

ASSISTANT (summary of response): Explained that the website text is generated from the Python code and that the Planning entry can be edited in main.py.

Screenshot supplied during conversation: image(20261112-153109).png

3. Prior assignment documents

> USER: I need it to be two files I submitted for assignments. They mentioned adding the files as documents.

ASSISTANT (summary of response): Explained uploading both documents to the GitHub repository and displaying their names in the website Planning section.

4. Names and uploads

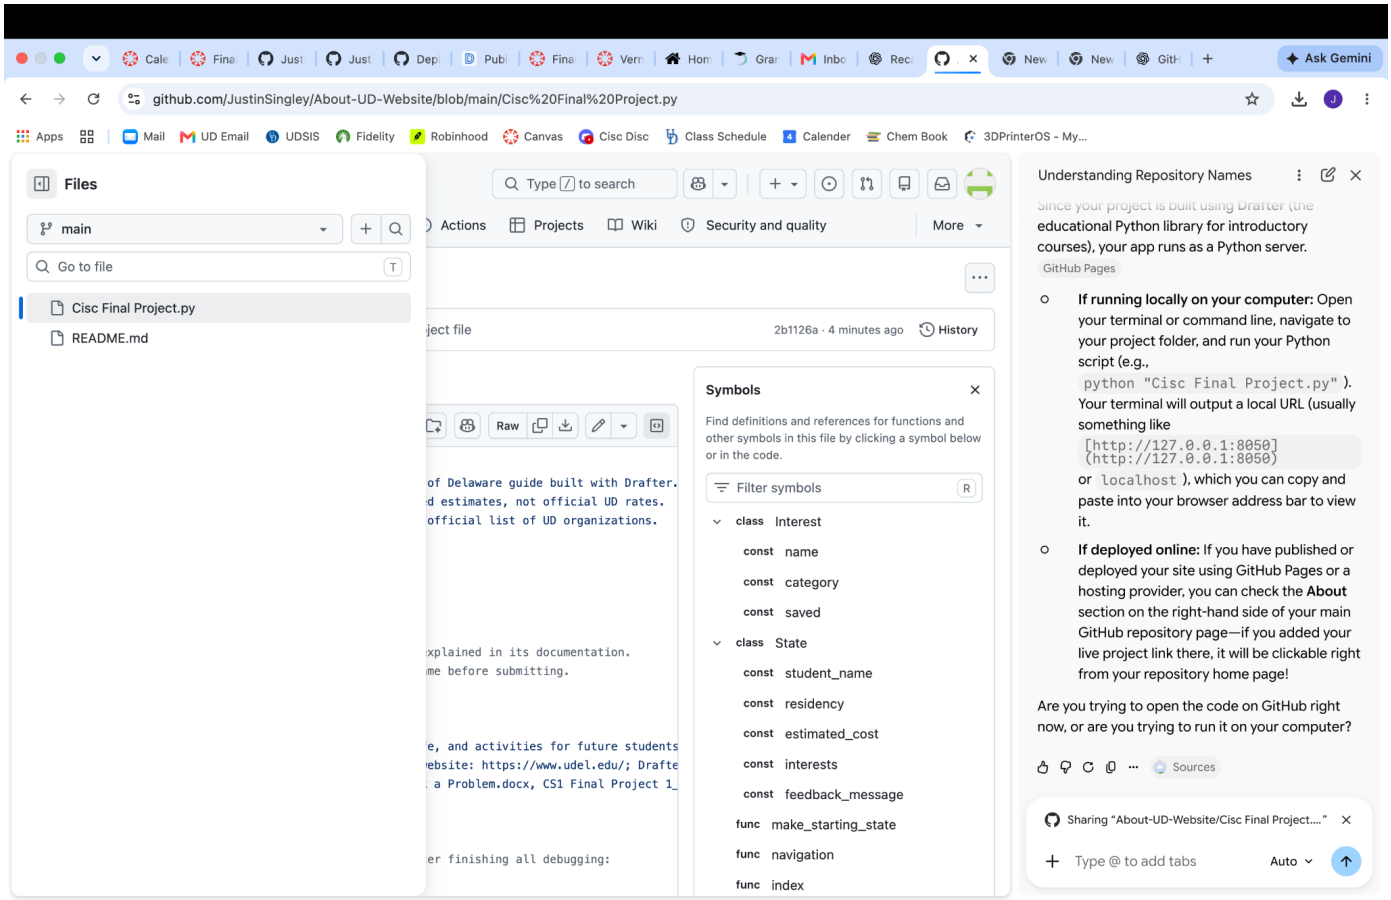

> USER: They said it is just the names of the documents but I need to also upload the files.

ASSISTANT (summary of response): Clarified that the website can list document names while the actual .docx files must also be uploaded to the repository.

5. Confirm upload

> USER: I uploaded my files but this is what it says on the left. Did they not upload properly?

ASSISTANT (summary of response): Identified that the screenshot showed only a Python file and README in the About-UD-Website repository; recommended adding the documents and explained the distinction between the two repositories.

Screenshot supplied during conversation: image(20261112-154116).png

6. Find deployed website

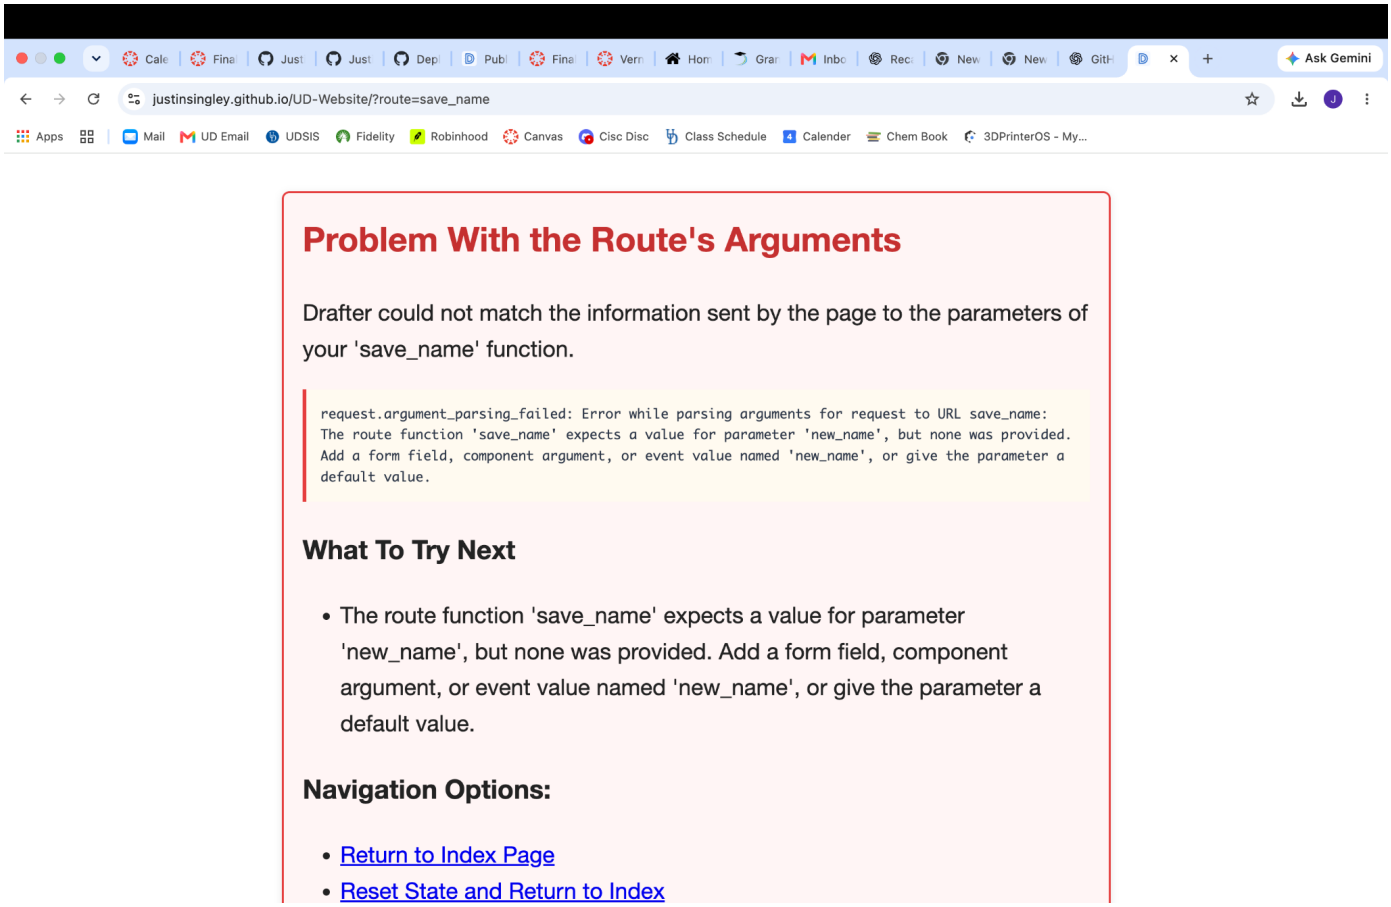

USER: Where do I go to find my actual website I deployed?

ASSISTANT (summary of response): Provided the GitHub Pages URL and Settings > Pages workflow. Pointed out UD-Website versus About-UD-Website.

7. Save Name error

USER: [Screenshot of Drafter: Problem With the Route's Arguments - save_name missing new_name.]

ASSISTANT (summary of response): Explained that the save_name route requires a new_name argument which was not being supplied to the route.

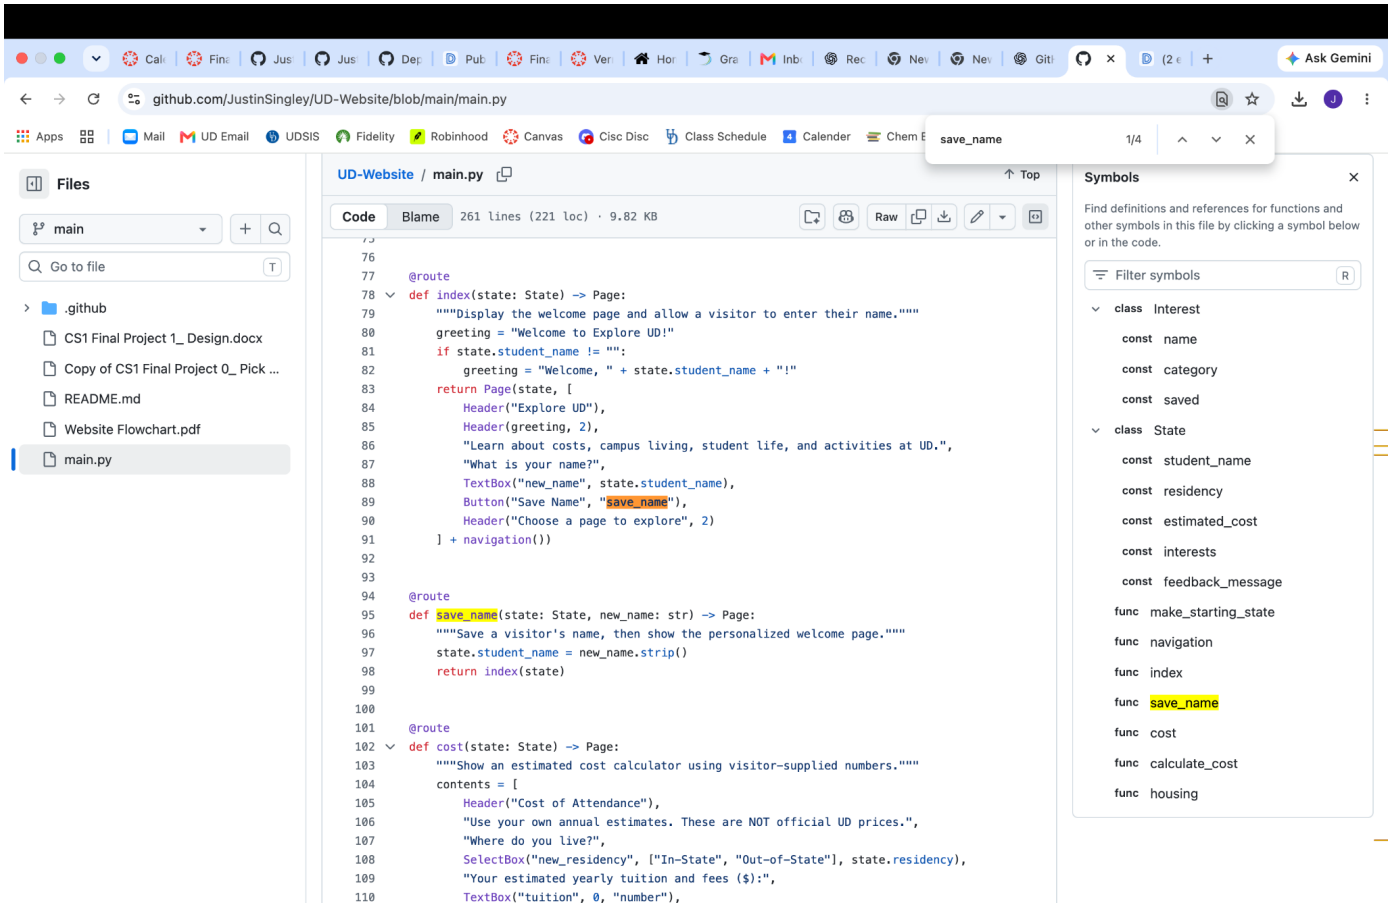

Screenshot supplied during conversation: image(20261112-154746).png

8. Inspect name handler

USER: [Screenshot of main.py showing TextBox(new_name), Save Name button, and save_name function.]

ASSISTANT (summary of response): Reviewed lines 88-98, suggested checking how Drafter sends form fields, and discussed the save_name handler.

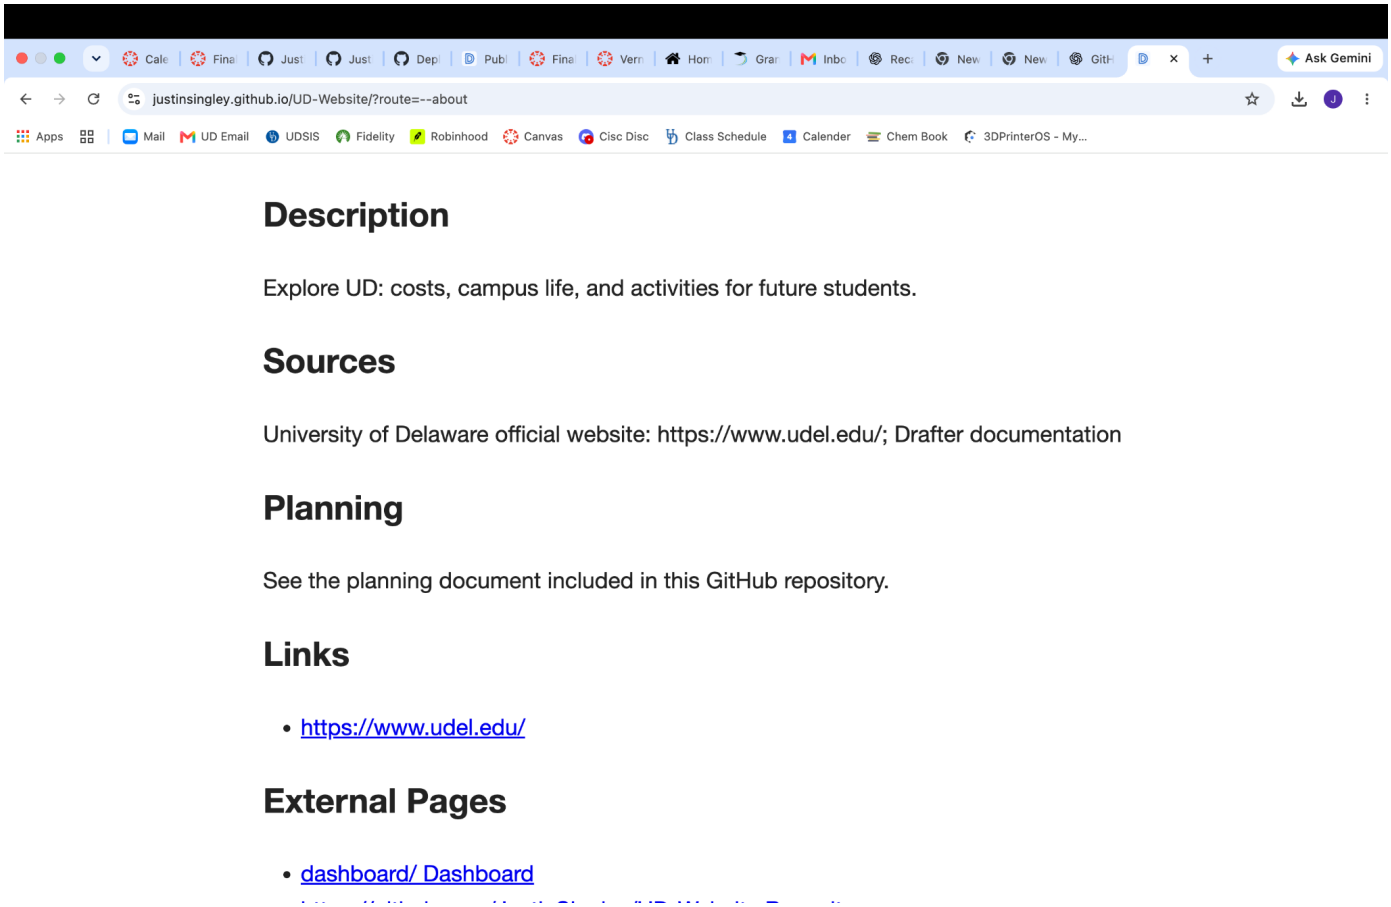

Screenshot supplied during conversation: image(20261112-154832).png

9. Planning text persists

USER: Why does my Planning still say that?

ASSISTANT (summary of response): Explained that uploading documents alone does not edit website text; identified the planning= metadata value for replacement.

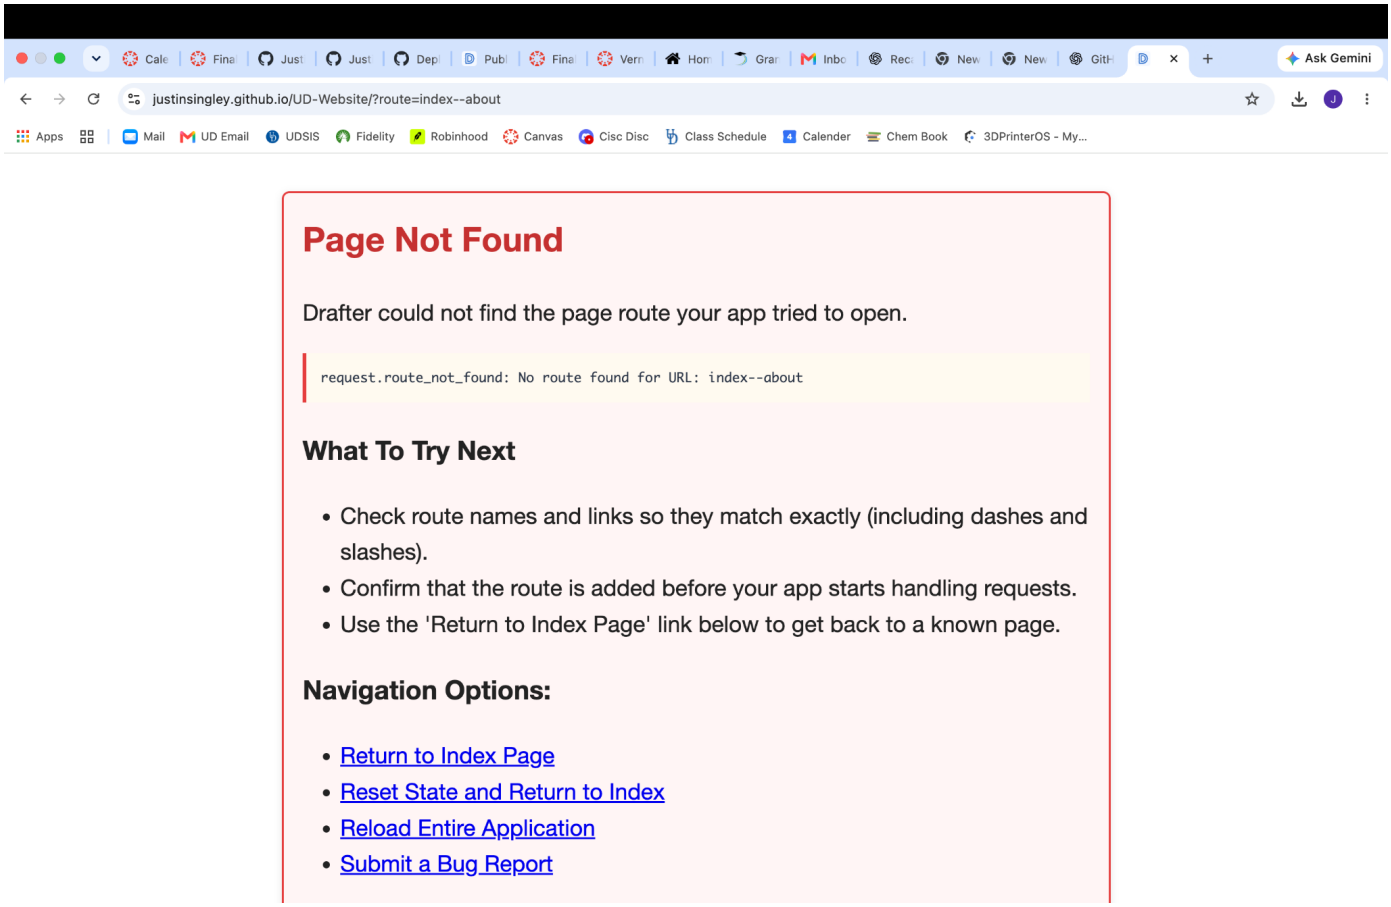

Screenshot supplied during conversation: image(20261112-155025).png

10. About-route error

> USER: I changed the actual code and now this is it. [Screenshot: Page Not Found, index--about.]

ASSISTANT (summary of response): Explained that index--about is not a valid registered route and recommended using the correct About route.

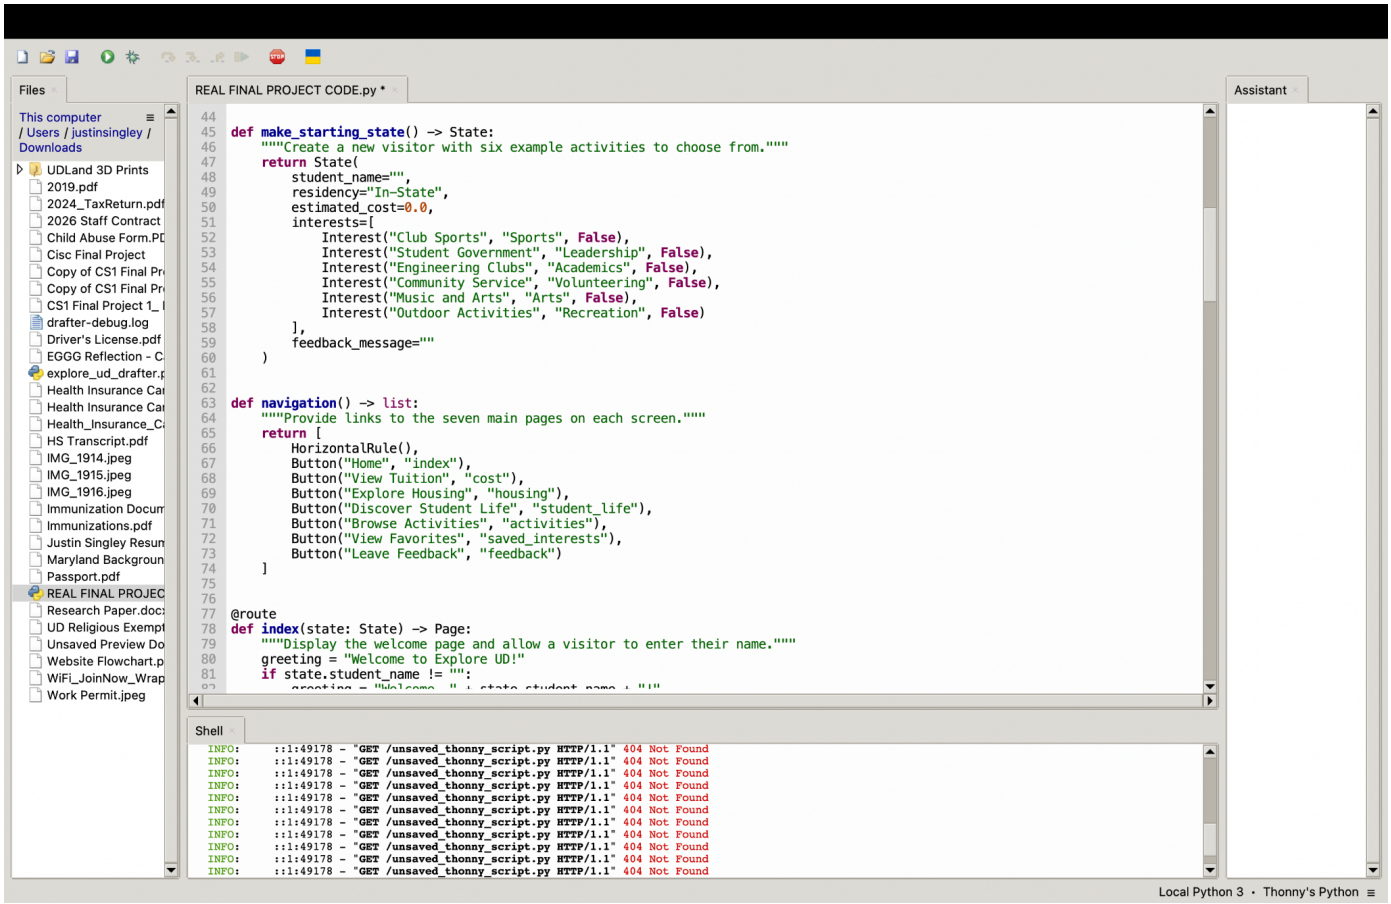

Screenshot supplied during conversation: image(20261112-155206).png

11. Inspect Thonny navigation

USER: [Screenshot of Thonny navigation() and make_starting_state().]

ASSISTANT (summary of response): Observed that navigation() buttons looked correct and Thonny changes do not deploy automatically.

Screenshot supplied during conversation: image(20261112-155326).png

12. Rename and replace Python file

USER: If I just changed the name of my Thonny file to main.py and replaced it, would that work?

ASSISTANT (summary of response): Said yes, provided the Save As, upload, commit and deployment instructions, noting that deployment must point to main.py.

13. Rename in Thonny

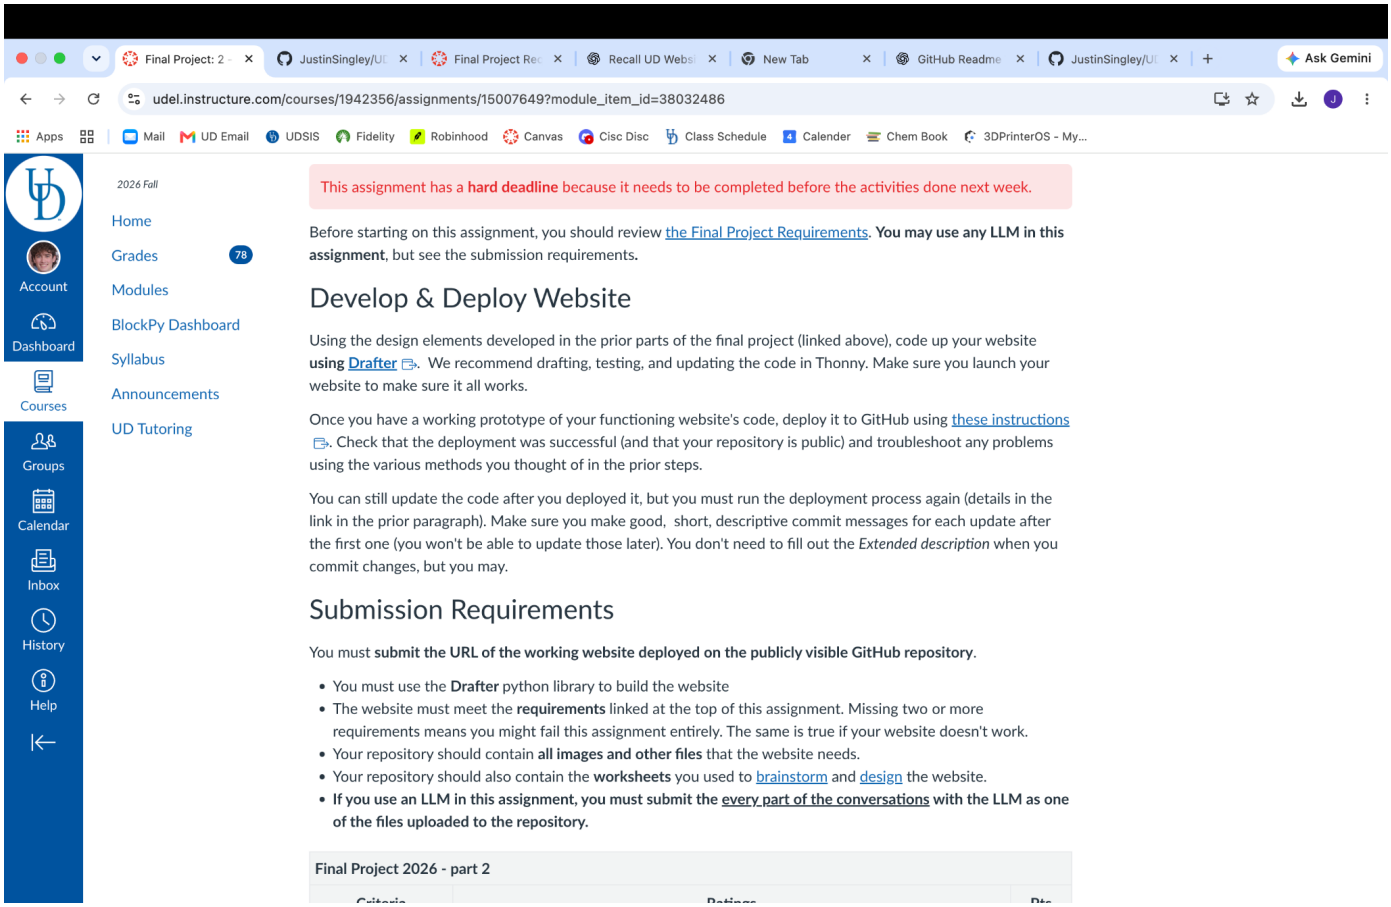

USER: How do I change the name?

ASSISTANT (summary of response): Explained File > Save As > main.py and saving a copy.

14. Assignment requirements

USER: [Screenshot of Canvas assignment requirements and screenshot of the index--about error.] This is what is required. I need to change and make the --about work first. What is the issue?

ASSISTANT (summary of response): Reviewed the requirements and identified index--about as the invalid route; suggested direct About-route testing.

Screenshot supplied during conversation: image(20261112-195317).png

15. Code review request

USER: Do you want a copy of my code and you can change it?

ASSISTANT (summary of response): Requested complete main.py, promising to retain features and correct About/navigation.

16. Shared full source file

USER: [Uploaded Pasted text(20261112-195532).txt containing the full original Python website code.]

ASSISTANT (summary of response): Reviewed the original source, its set_site_information configuration, state, navigation, routes, tests, and start_server call.

17. Replacing file

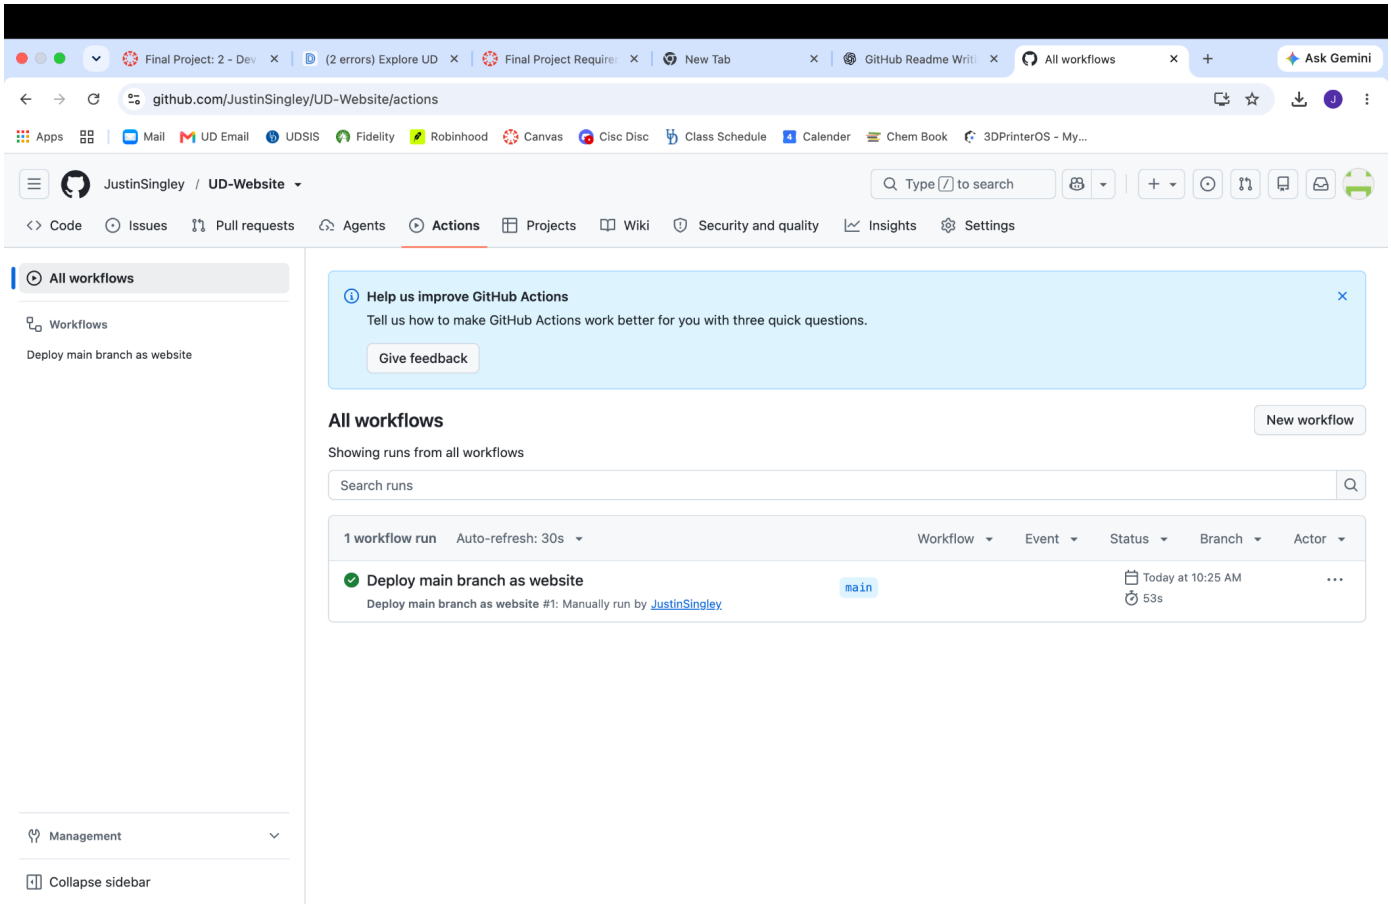

USER: I was not able to replace it. How do I just delete it?

ASSISTANT (summary of response): Provided GitHub deletion steps and advised uploading replacement main.py immediately afterward.

18. GitHub Actions status

USER: Is deployment successful? [Screenshot of green GitHub Actions workflow.]

ASSISTANT (summary of response): Confirmed that the workflow had a green success indicator, while cautioning that runtime buttons still needed testing.

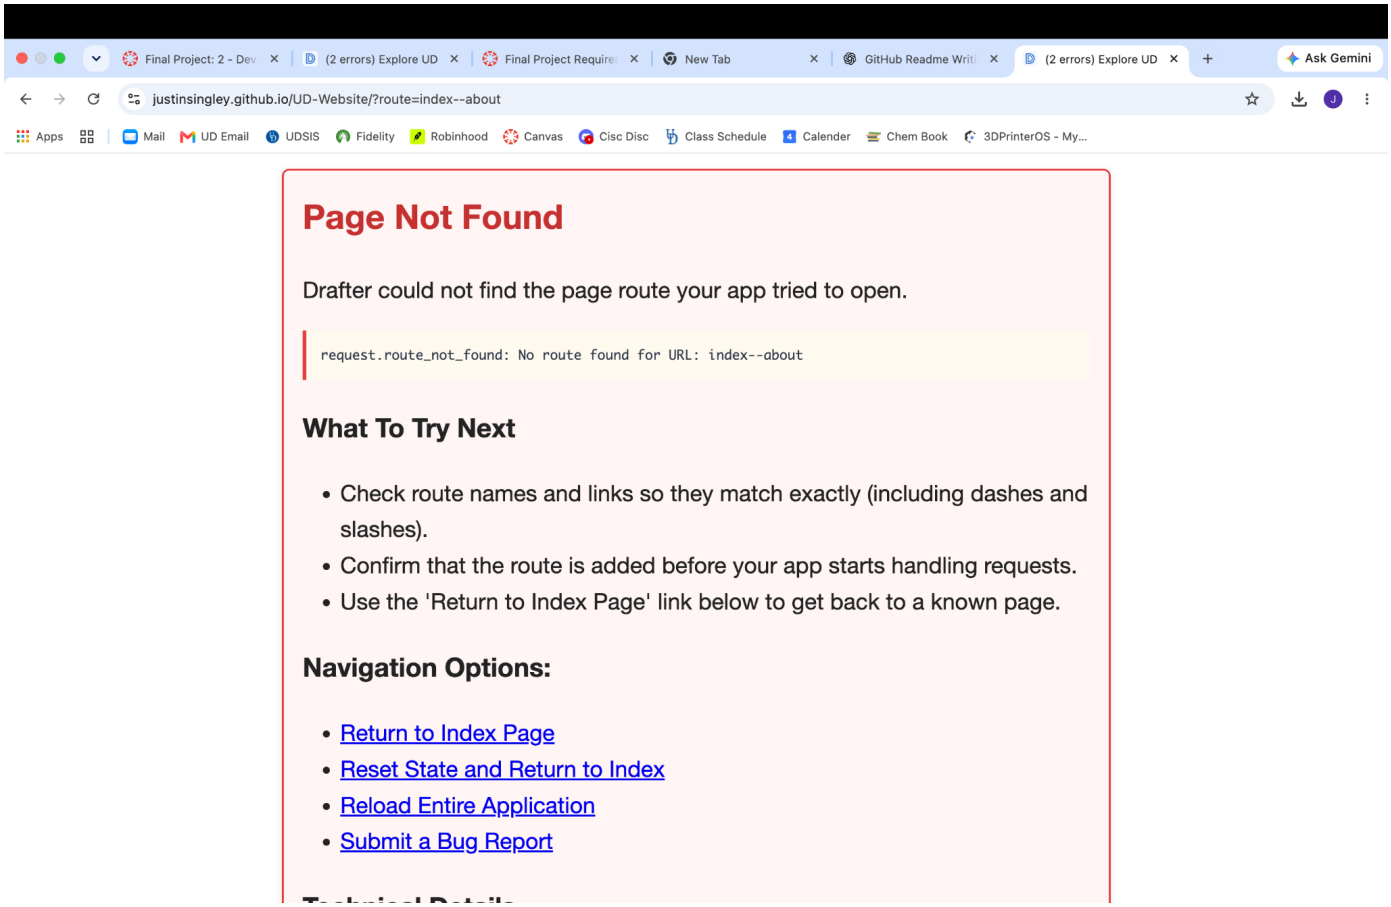

Screenshot supplied during conversation: image(20261112-195836).png

19. Error after deploy

USER: [Screenshot of Page Not Found for route=index--about.]

ASSISTANT (summary of response): Recommended returning to the clean home URL and testing the new explicit about route.

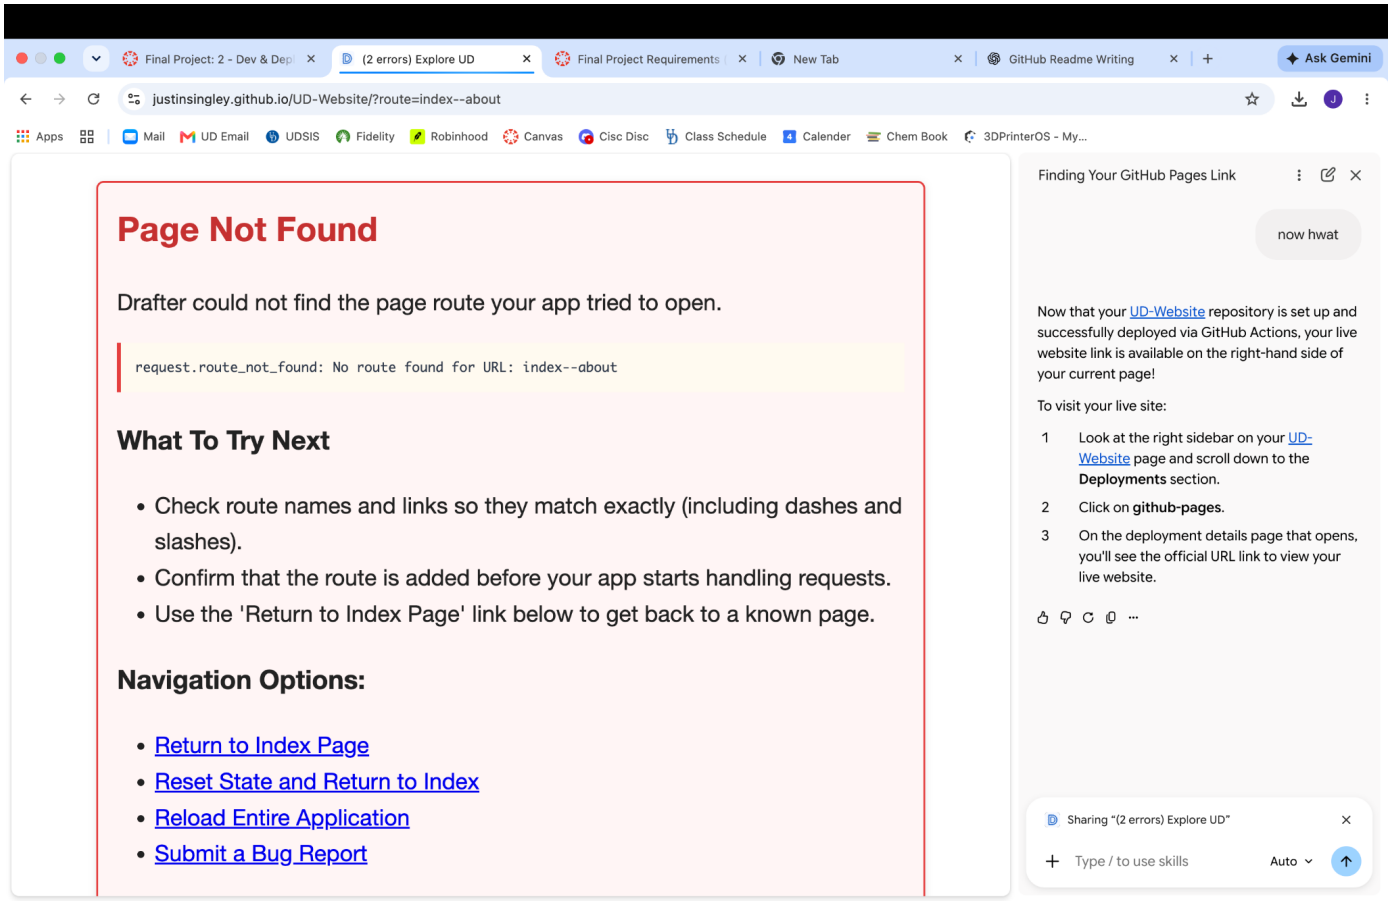

Screenshot supplied during conversation: image(20261112-200035).png

20. Assignment review and URL correction

USER: [Screenshots of Canvas assignment and Drafter error.]

ASSISTANT (summary of response): Discussed requirements and corrected the browser URL to remove the invalid query.

Screenshot supplied during conversation: image(20261112-195435).png

21. Browser address bar

USER: Delete everything after UD-Website/. And click Enter?

ASSISTANT (summary of response): Confirmed that the bare site URL should be used.

22. Homepage accessible

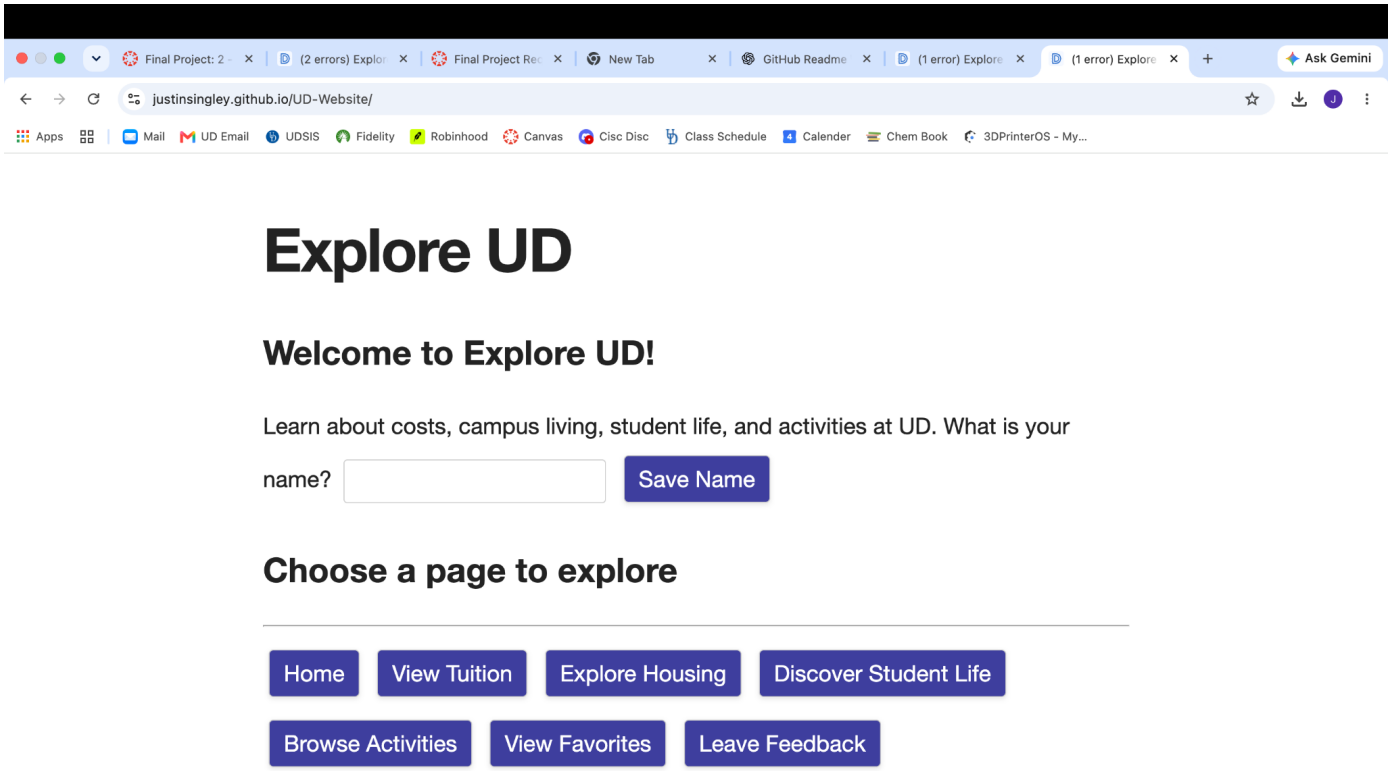

USER: Yes it does.

ASSISTANT (summary of response): Confirmed homepage works and asked to test About button.

23. Homepage missing About button

USER: This is my homepage.

ASSISTANT (summary of response): Noted that the page still showed seven rather than eight buttons and advised checking whether the updated main.py was deployed.

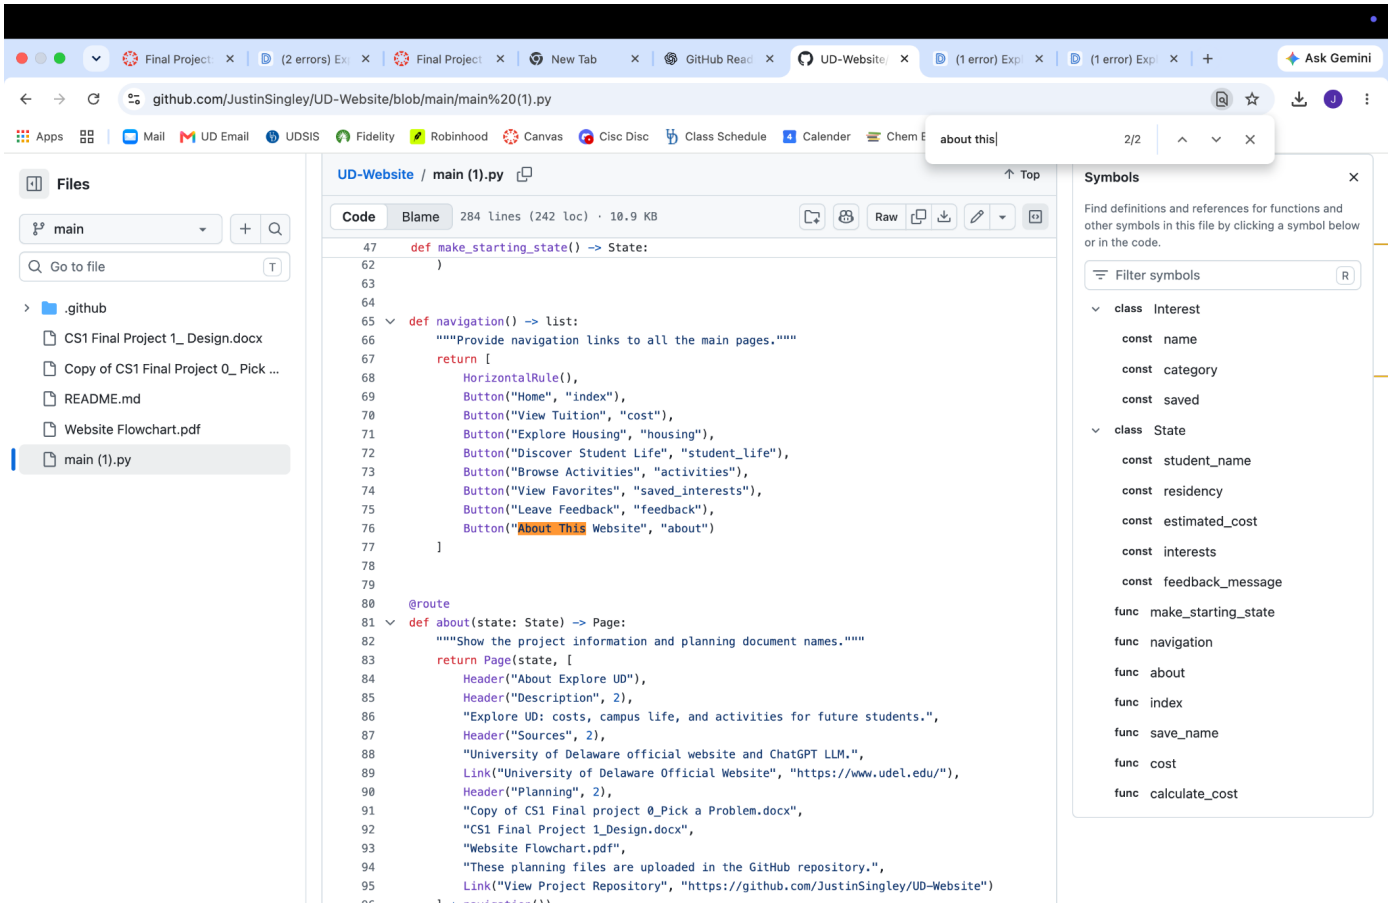

Screenshot supplied during conversation: image(20261112-200200).png

24. Uploaded wrong filename

USER: [Screenshot of GitHub file main (1).py showing new About This Website button and about route.]

ASSISTANT (summary of response): Identified the exact filename error: the new file was main (1).py rather than main.py; provided rename/copy guidance.

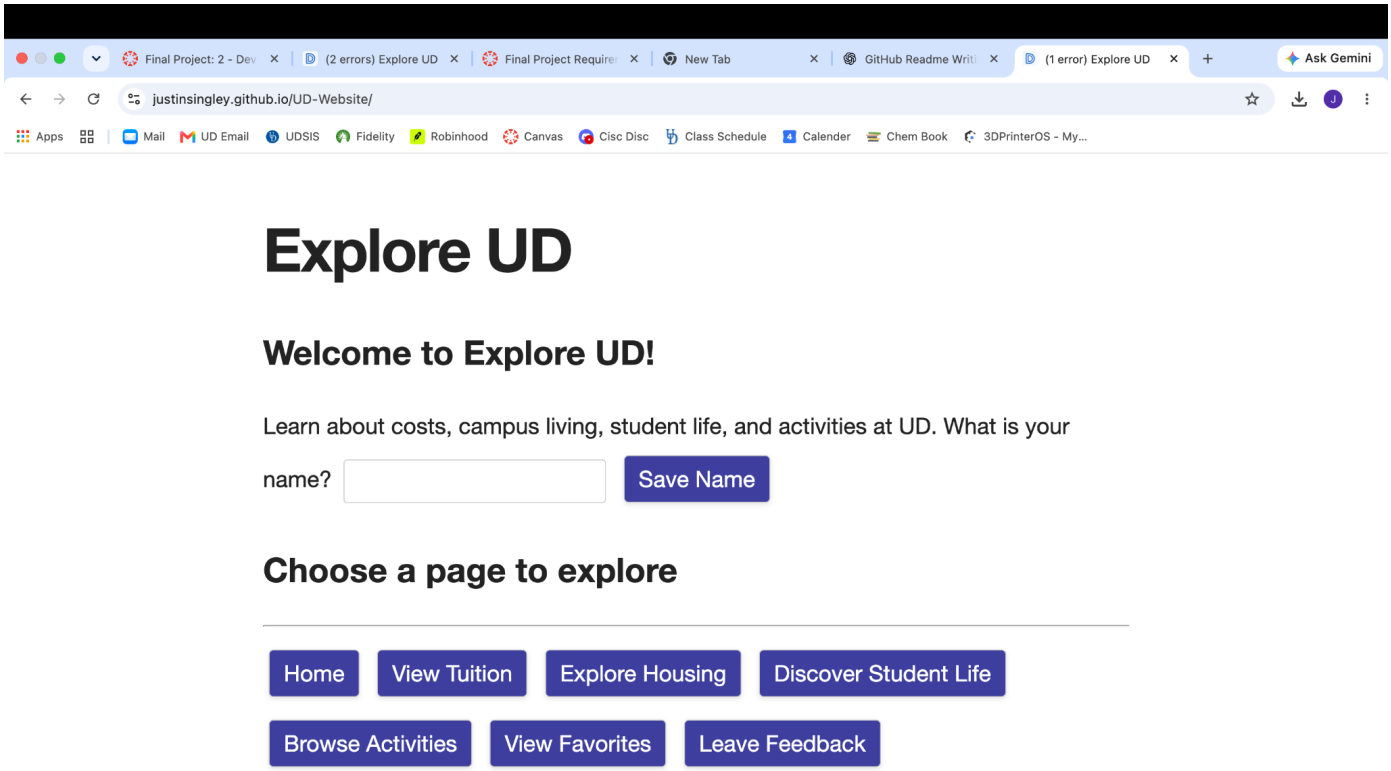

Screenshot supplied during conversation: image(20261112-200256).png

25. Still old homepage

USER: [Screenshot of seven-button homepage.]

ASSISTANT (summary of response): Advised checking current main.py and redeploying on the main branch.

Screenshot supplied during conversation: image(20261112-200415).png

26. Running workflow

USER: How do I run the deployment workflow again?

ASSISTANT (summary of response): Explained Actions > Deploy main branch as website > Run workflow > select main.

27. Button appeared

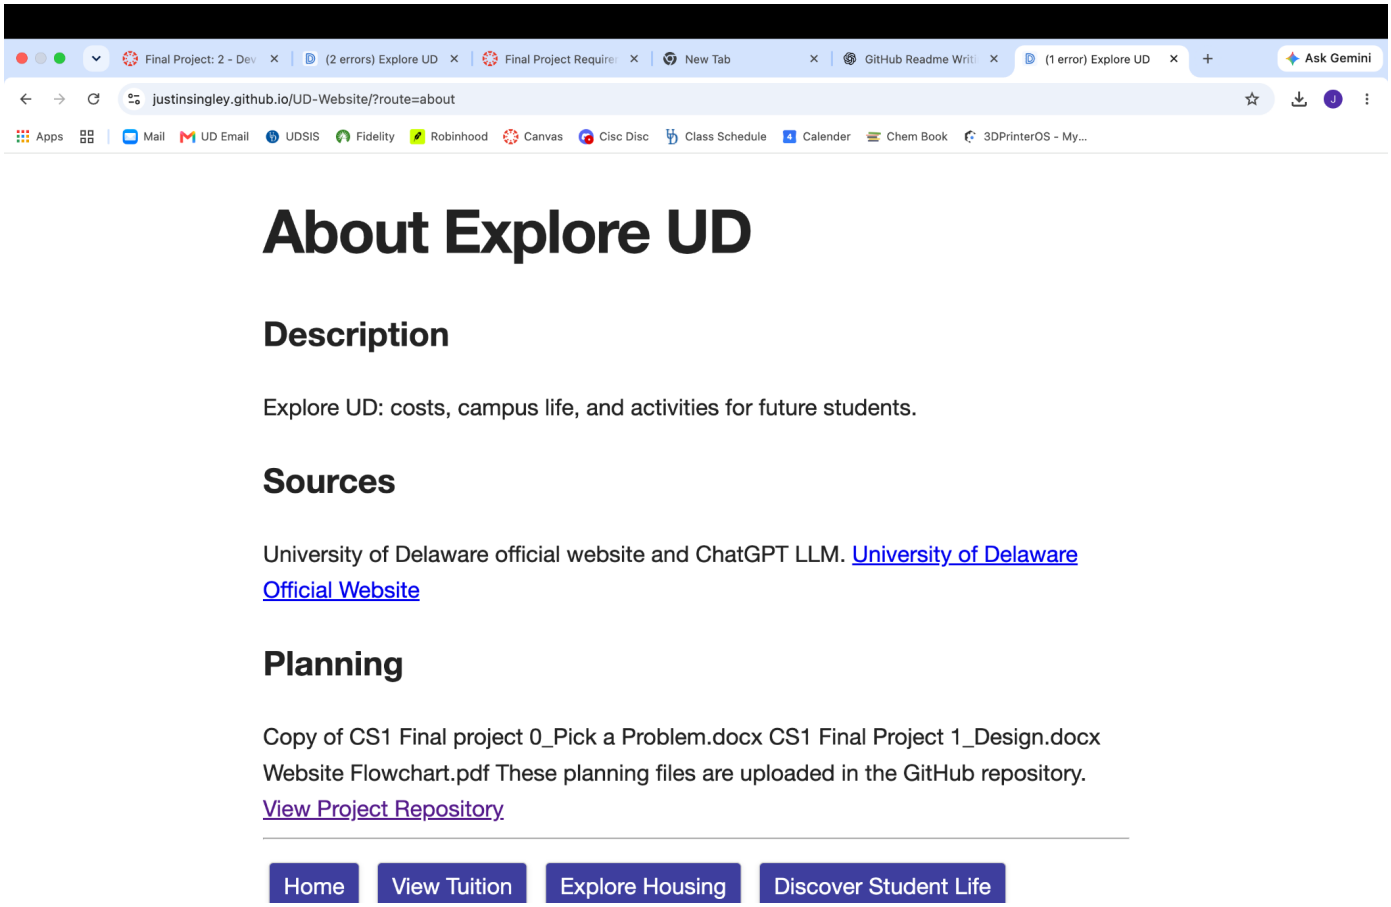

USER: It appeared.

ASSISTANT (summary of response): Confirmed new code appeared, asked user to test About and planning names.

28. About page works

USER: [Screenshot showing About Explore UD, Description, Sources, Planning, View Project Repository.]

ASSISTANT (summary of response): Confirmed About route opens and the planning files are listed. Suggested formatting filenames on distinct lines.

Screenshot supplied during conversation: image(20261112-200815).png

29. Separate planning lines

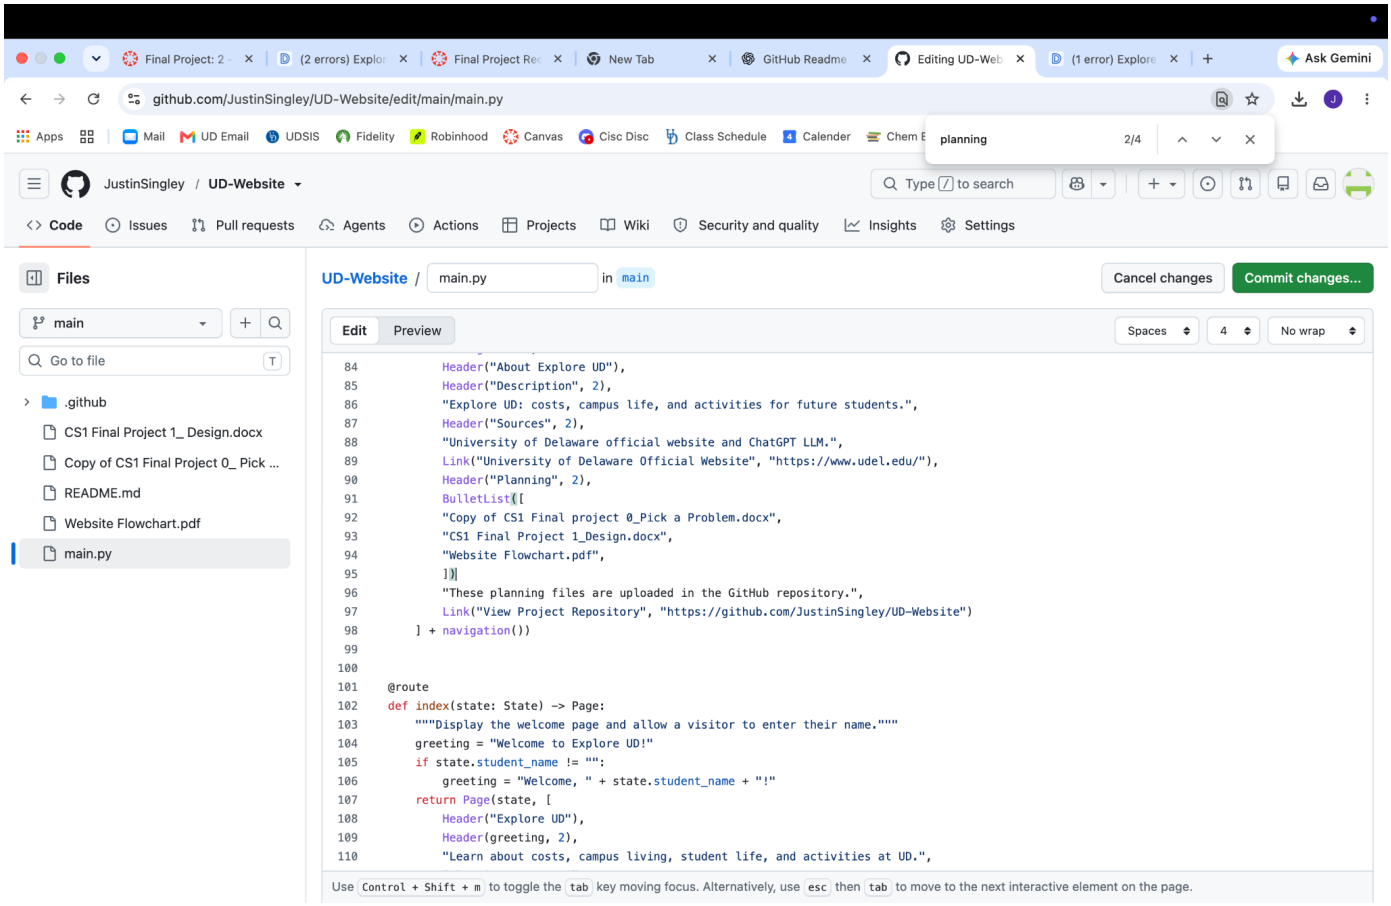

> USER: Can I make them different lines?

ASSISTANT (summary of response): Suggested replacing consecutive string entries with a list component; later corrected an unsupported name.

30. Bullet list edit

> USER: Like that? [Screenshot of planning section using BulletList([...])].

ASSISTANT (summary of response): Corrected the proposed component name in a follow-up, although the subsequent build failed.

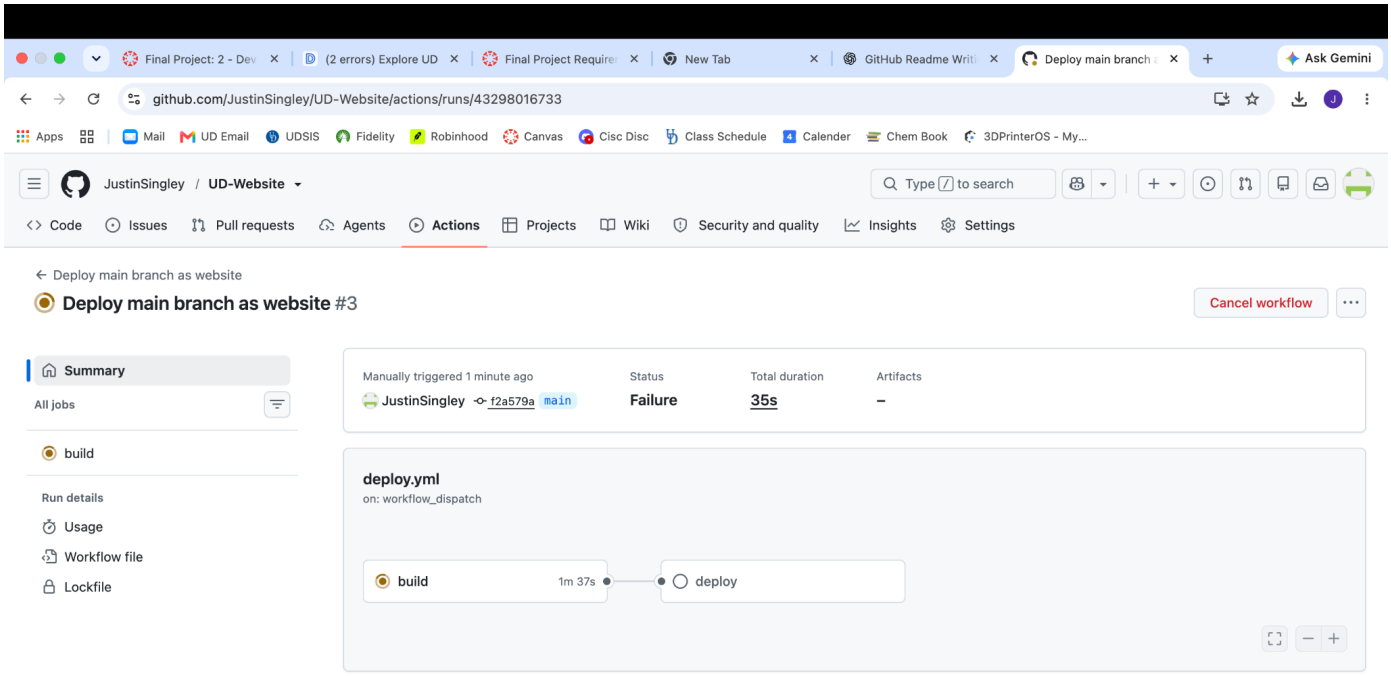

Screenshot supplied during conversation: image(20261112-201153).png

31. Deployment failure

USER: Can you just do the code in that format? [Screenshot of failed GitHub Actions build.]

ASSISTANT (summary of response): Proposed a safer Paragraph() for each filename rather than a bullet-list component.

Screenshot supplied during conversation: image(20261112-201433).png

32. Full rewritten code

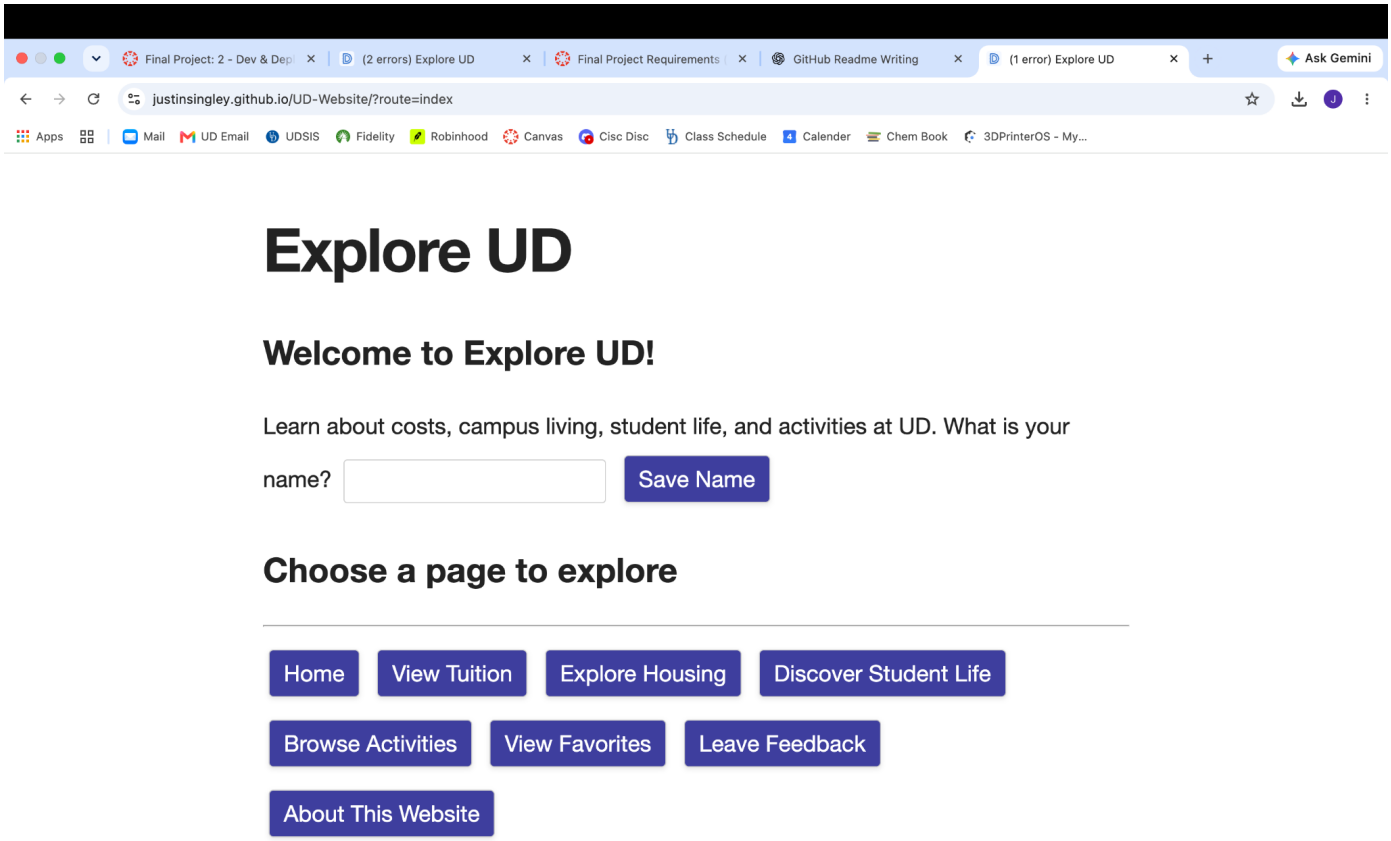

> USER: Just retype the whole code so I can copy and paste it.

ASSISTANT (summary of response): Provided a full Python script with eight navigation buttons, explicit About route, three separate planning Paragraph entries, cost calculator, interest checkboxes, feedback form, tests, and start_server call.

33. Error indicator

> USER: Does it matter that in the tab it says (1 error) Explore UD?

ASSISTANT (summary of response): Explained that a tab error count means Drafter reported at least one application error and should be investigated before submission.

Screenshot supplied during conversation: image(20261112-201912).png

34. Repository URL

USER: Give me a link to my repository.

ASSISTANT (summary of response): Provided https://github.com/JustinSingley/UD-Website .

35. Conversation submission

USER: I need to upload this whole conversation as one of the files to the repository. Can you make all this a PDF or something?

ASSISTANT (summary of response): Generated this reference record and explained that the original full chat must be printed/exported separately for a verbatim submission.

Appendix A - Full Python code supplied by user

Original uploaded code from Pasted text(20261112-195532).txt, included for traceability. The later updated code was discussed separately.

Submission instructions for the exact transcript

1. Open this original ChatGPT conversation in your browser.
2. Scroll through the entire conversation so that older messages and screenshots are loaded.
3. Use the browser Print command (Command+P on Mac). Select Save as PDF.
4. Review the PDF carefully to confirm that every prompt, assistant reply, long code block and screenshot is included.
5. Upload the exact-transcript PDF to the public UD-Website repository using Add file > Upload files > Commit changes.
6. For a strict every-part-of-the-conversations requirement, use that exact chat PDF rather than relying only on this reconstructed reference.
